Side Shop

Proposed by: Louis Alfred P. Fontelo

RATIONALE

Side Shop is an E-Commerce website. The shop mainly offers computer products. Side shop also provides multiple payment methods including cash-on-delivery, comprehensive customer care and returns opportunities.

The main purpose of this project is to help customers find the best computer parts for them to buy. I have come up with this idea because I personally am interested with computer parts, and I wanted to share my knowledge by providing the best products that I could find.

The availability of the products proposed is not yet present. As of now, Side Shop will name the specific parts that are considered by its quality including its price.

GENERAL AND SPECIFIC OBJECTIVE

The general objective of this project is to successfully create a fully functional e-commerce website with various features and an attractive design matching the theme which is "technology".

The specific objective is to provide authentic and high quality supplies and to make a convenient payment method for the customers. The website design should also be user friendly.

FEATURES

Side Shop is aiming to develop these features:

- User accounts

- Sorting of Products

- Provides Images of the computer parts

- Responsive web design

- Allows users to comment their thoughts about the products

- Allows users to rate the products

- Convenient payment method

- Techy Theme

...and many more!
