

# Side Shop

Proposed by: Louis Alfred P. Fontelo

# **RATIONALE**

Side Shop is an E-Commerce website. The shop mainly offers computer products. Side shop also provides multiple payment methods including cash-on delivery, comprehensive customer care and returns opportunities.

The main purpose of this project is to help customers find the best computer parts for them to buy. I have come up with this idea because I personally am interested with computer parts, and I wanted to share my knowledge by providing the best products that I could find.

The availability of the products proposed is not yet present. As of now, Side Shop will name the specific parts that are considered by its quality including its price.

## **GENERAL AND SPECIFIC OBJECTIVE**

The general objective of this project is to successfully create a fully functional e-commerce website with various features and an attractive design matching the theme which is “technology”.

The specific objective is to provide authentic and high quality supplies and to make a convenient payment method for the customers. The website design should also be user friendly.

# FEATURES

Side Shop is aiming to develop these features:

- Menu – It is where the user can find the other option available in the website.
- Home – The home page of the website. This is the first page that appears when the website is visited.
- Account – Views the user's profile or account. This includes the information about user.
- Search – This is where the user can search anything that can be found in the website.
- Arrows (Left and Right) – This will change the image when clicked. The image shown will be the featured products.
- Shop Now Button – This will take the user to the feed where all of the products available are shown.

Side Shop may also contain these features:

- Category – An option for the user where the products are shown depending on its particular category.
- Sort – This sorts the product according to the user, whether by price, name, etc.

and many more..
